TITLE: An Economic Substantiation of the Firm Capacity of a Hydroelectric Station (Ekonomicheskoye obosnovaniye obespechennoy otdachi GES)

PERIODICAL: Tr. Mosk. energ. in-ta (Transactions of the Moscow Power-Engineering Institute), 1956, Nr 19, pp 48-57

ABSTRACT: Firm capacity is the maximum capacity of a hydroelectric station that is fully used in the system as a working power and also as a system reserve. Usually, the hydroelectric station capacity used in the year when it covered 99% of demand (without duplication) is referred to as the minimum firm capacity over many years. In particularly low-water years, the average value (over many years) of the energy deficit would constitute only a few hundredths of 1%. On the other hand, an increase in the rated capacity of a hydroelectric station would bring about an increase in the system expenses for building the reserves and for compensating the deficit in low-water years. The author

Card 1/2

112-57-8-16330

An Economic Substantiation of the Firm Capacity of a Hydroelectric Station

points out the possibility of creating a reserve in the form of a regulating consumer. Such consumers could increase their production according to the additional yield over the rated year. The optimum value of firm capacity is determined by the minimum of people's economic expenses for production and consumption of electrical energy. This optimum value depends on the cost of the system reserve, on the degree of regulation of water flow, and on the runoff distribution within one year and over many years. Formulae are derived for determining firm capacities for various system reserves.

Hydroelectric Power Plants (Metodika opredeleniya raschëtnoy
vespechennosti moshchnosti proyektiruyemykh ges)

PERIODICAL: Gidrotekhnicheskoye Stroitel'stvo, 1958, Nr 3, pp 38 - 45(USSR)

ABSTRACT: Several publications on methods of determining the guaranteed
capacity of hydroelectric power plants have come out in the
past years. This article suggests a simple method and norms
worked out and tried experimentally in the Sektsiya vodokho-
zyaystvennykh problem AN SSSR (Section of Water-Engineering
Problems of the AS USSR), the Institut energetiki AN Kazakhskoy
SSR (Institut of Energetics of the AS Kazakh SSR) and the Vodo-
energeticheskiy institut AN Armyanskoy SSR (Water-Power Institute
of the AS Armenian SSR). There are 5 graphs, 2 tables, and 10
Soviet references.

TITLE: Increase of Water Power Economy Effect

PERIODICAL: Gidrotekhnicheskoye stroitel'stvo, 1959, Nr 9,
pp 20-27 (USSR)

ABSTRACT: Specific amounts invested per installed kw for construction of hydropower plants in USSR during the 7-10 years were too high in comparison with those invested for thermal power plants during the same period. The authors recommend measures which could cut costs of hydropower plants (by using water for other water-economy purposes more extensively). The measures have also been studied by the Energeticheskiy institut AN SSSR (Power Institute of the USSR Academy of Sciences) and by the "Gidroenergoprojekt". They explain these low costs of thermal power plants by their fast development (improved equipment and large generating

SOV/22-12-3-2/9

TITLE: On a Difference Method for the Investigation of the Stability and Oscillations of Plates

PERIODICAL: Izvestiya Akademii nauk Armyanskoy SSR. Seriya fiziko-matematicheskikh nauk, 1959, Vol 12, Nr 3, pp 15-28 (USSR)

ABSTRACT: In the domain H let be given the differential equation

$$(1) \quad K[w] = L[w] - \lambda N[w] - f = 0,$$

where $L[w]$ and $N[w]$ are linear homogeneous differential operators the principal parts of which have the form

$$\sum_{\tau \leq m} C_{\tau_1, \dots, \tau_n} \frac{\partial^{\tau} w(x_1, x_2, \dots, x_n)}{\partial x_1^{\tau_1} \dots \partial x_n^{\tau_n}} \text{ and } \sum_{\tau \leq 1} M_{\tau_1, \dots, \tau_n} \frac{\partial^{\tau} w(x_1, \dots, x_n)}{\partial x_1^{\tau_1} \dots \partial x_n^{\tau_n}},$$

respectively, $\tau = \tau_1 + \tau_2 + \dots + \tau_n$ and C, M, f are given functions of the x_1, \dots, x_n ; $m > 1$. Let the boundary condition be

$$\sum_{\tau \leq m-1} E_{\tau_1, \dots, \tau_n} \frac{\partial^{\tau} w}{\partial x_1^{\tau_1} \dots \partial x_n^{\tau_n}} = 0,$$

Card 1/3

On a Difference Method for the Investigation of the SOV/22-12-3-2/9
Stability and Oscillations of Plates

where the E are known. For the determination of the unknown function w the author covers the domain H with a rectangular net with the node $Q_j(x_{1j}, x_{2j}, \dots, x_{nj})$, $j=1, 2, \dots, N$ and approximates (1) by the system of linear algebraic equations

$$(2) \sum_{z=-q}^q [S_{i,y+z}(x_{1,j})w_{1,j+z}(x_{1,j}) - \lambda R_{1j}(x_{1,j})w_{1,j}(x_{1,j})] = f_{1,j}(x_{1,j}).$$

Now the solution is sought in the form

$$w(x_{1,j}) = \sum_{k,t,\dots,r} A_{k,t,\dots,r} \psi_{1k}(x_{1j}) \psi_{2t}(x_{2j}) \dots \psi_{nr}(x_{nj}).$$

The postulate that (1) vanishes identically for the given boundary conditions is replaced by the weaker postulate that $K[w(x_{1,j})]$ is orthogonal to all functions $\psi_{1,\nu}(x_{1,j})$. These assumptions lead to a system of equations from which λ can be determined in the homogeneous case and the A can be determined in the inhomogeneous case. The method converges in all cases where the method of Bubnov-Galerkin is convergent. The author uses the method for the investigation of the stability and

Card 2/3

Stability and Oscillations of Plates

oscillations of a quadratic plate which is supported freely and which is charged in its plane along the boundary by uniformly distributed forces acting normally to the boundary, and for the examination of the stability of a plate of variable thickness for a compressive load by steps. The deviation from the rigorous solution amounts 2%. An example is calculated. There are 6 figures, 1 table, and 12 Soviet references.

SOV/6206

75
 COVERAGE: The book is a collection of articles delivered at the Conference on Plates and Shells held in Kazan' from 24 to 29 October 1960. The articles deal with the mathematical theory of plates and shells and its application to the solution, in both linear and nonlinear formulations, of problems of bending, static and dynamic stability, and vibration of regular and sandwich plates and shells of various shapes under various loadings in the elastic and plastic regions. Analysis is made of the behavior of plates and shells in fluids, and the effect of creep of the material is considered. A number of papers discuss problems associated with the development of effective mathematical methods for solving problems in the theory of shells. Some of the reports propose algorithms for the solution of problems with the aid of electronic computers. A total of one hundred reports and notes were presented and discussed during the conference. The reports are arranged alphabetically (Russian) by the author's name.

TITLE: The stability of orthotropic plates with step like change
in rigidity

PERIODICAL: Doklady Akademii nauk SSSR, v. 137, no. 5, 1961, 1086-1089

TEXT: Oscillations of orthotropic rectangular plates are studied, the plates showing a step like variation of the rigidity. The plates are assumed to be under the action of a force of compression T in the direction of the length. The problem is solved with the help of finite differences and the method of Bubnov-Galerkin. By means of a rectangular lattice each side of the plate is divided into n equal parts with lattice constant $\epsilon = a/n$. The divergence u_0 of the plate satisfies in each part of the lattice the difference equation:

Card 1/6

21969

S/020/61/137/005/012/026
B104/B214

The stability of orthotropic ...

$$2(3 + 3k_1 + 4k_2)u_0 - 4(k_1 + k_2)(u_1 + u_2) - 4(1 + k_1)(u_1 + u_2) + \\ + 2k_2(u_3 + u_4 + u_7 + u_8) + k_2(u_{11} + u_{12}) + u_9 + u_{10} = \\ = \lambda \frac{P_v}{R_v} (2u_0 - u_1 - u_2) + Fu_0, \quad (1) \quad (1).$$

Here, $P_v = (T_0 + T_1 + \dots + T_v)/T_0$, $T = \sum_v T_v$, v is the number of parts of the plate, $R_v = D_v/D_0$; $\lambda = a^2 T_0/D_0 n^2$; $F = \rho p^2 a^4/D_0 n^4$; $k_2 = D_2/D_0$; $k_3 = D_3/D_0$; $D_0 = E_0 h^3/12(1 - \mu_1 \mu_2)$ is the cylindrical rigidity of the first part along ox , D_v the same for the v -th part, $D_2 = E_2 h^3/12(1 - \mu_1 \mu_2)$; $D_3 = D_0 \mu_2 + 2D_k$; $D_k = Gh^3/12$; p is the frequency of oscillations, and ρ the mass of the plate per unit area. A formula is obtained for the relation between the frequencies p of the characteristic oscillations and

Card 2/6

21962
S/020/61/137/005/012/026
B104/B214.

The stability of orthotropic ...

the compression T acting along the length of the plate at $\xi = 0$,
 $\xi = 0.5$, and $\xi = 1$:

$$p^2 = \frac{9.65(R_1 + P_1)}{a^2(R_1 + 1)} \left[\frac{19.34(1 + k_1 + 2k_2)D_1}{a^2(R_1 + P_1)} - T \right]. \quad (3) \quad (3).$$

From this equation the frequency of the oscillations can be found if the magnitude of the force of compression is known. The fundamental frequency of the characteristic oscillations is found for $T = 0$. The critical load is written in the form: $T_{cr} = VD_v/a_{red}^2$. Here, $a_{red} = \alpha a$ the reduced side of the plate, α is a coefficient depending on the manner of loading and the boundary conditions of the plate. Thus, the problem is reduced to finding the α values for different ratios between R_v and R_v (Fig. 2). The principle of Volterra-Rabotnov (Ref. 3: Yu. N. Rabotnov, Prikl. matem. i mekh., 12, v. 1, (1948)) is used for taking into account

Card 3/6

21707

S/020/61/137/005/012/026
B104/B214

The stability of orthotropic ...

the effect of rheologic material properties on the critical forces of orthotropic plates, and with the help of integral operators the following approximate formula is derived for the critical forces:

$$T_{kp}(t) \approx T_{kp}(0) \left\{ 1 - \sum_{i=1}^3 \frac{a_i}{\beta_i} [1 - \exp(\gamma_i \beta_i t)^{1-\alpha}] \right\}. \quad (12). \quad (12).$$

Here, $T_{kp} = T_{cr}$, $a_1 = E_{10} h \delta_1 (1 + 2\mu_2)/T$; $a_2 = E_{20} h \delta_2/T$;

$a_3 = 4G_0 h^3 \delta_3 (1 - \mu_1 \mu_2)/T$; $\beta_1 = \delta_1 \tau_1^{-1}$, τ_1 are the relaxation times,

$\delta_1 = (E_{10} - E_{1\infty})/E_{10}$; $\delta_2 = (E_{20} - E_{2\infty})/E_{20}$; $\delta_3 = (G_0 - G_{\infty})/G_0$;

$\gamma_1 = (1 - \alpha)^{1-\alpha}$; E_{10} , E_{20} , and G_0 are the instantaneous moduli

of elasticity and shear. N. Kh. Arutyunyan, M. I. Rozovskiy, A. Yu. Ishlinskiy and A. R. Rzhantsyn are mentioned. There are 2 figures and 7 Soviet-bloc references.

TITLE: A method for producing phosphoro-potassium fertilizers. Class 16, No. 171-
409

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 11, 1965, 31

TOPIC TAGS: fertilizer, phosphate, potassium

ABSTRACT: This Author's Certificate introduces a method for producing phosphoro-
potassium fertilizers using cement dust (waste from cement production) as the potas-
sium raw material. The process of adding potassium to the product is simplified
and evaporation is prevented by using a 20% excess of an acid which directly neutra-
lizes the cement dust for breaking down the phosphate raw material.

4425. THE TECHNIQUE OF DUODENAL INTUBATION (Russian text) - Feldman M. Ya. - ZDRAVOOKHR. KIR. 1957, 1 (58-59)
In attempting duodenal intubation it is not always possible to pass the tube into the duodenum because of pyloric spasm or looping of the tube in the stomach. The author recommends the following method: after the patient has swallowed the tube up to the first marking a clock is placed in front of him, and he is asked to swallow the tube very slowly up to the second marking (within 20 min.), and then up to the third marking (25 min.). This method is efficient and simple. (S)

TITLE: Investigation of lead titanate - lanthanum titanate solid solutions (Report, Fourth All-Union Conference on Ferro-electricity held at Rostov-on-the Don 12-16 September 1964)

SOURCE: AN SSSR. Izvestiya. Seriya fizicheskaya, v. 29, no. 11, 1965, 2050-2054

TOPIC TAGS: ferroelectric material, piezoelectric ceramic, solid solution, lead, lanthanum, titanate, dielectric constant, dielectric loss, Curie point, lattice parameter, electric polarization, piezoelectric modulus

ABSTRACT: The ferroelectric and piezoelectric properties of $(1-x)\text{PbTiO}_3 + x\text{La}_{2/3}\text{TiO}_3$ solid solutions were investigated. The specimens were synthesized from the oxides by a special ceramic technique described in an Inventor's Certificate by I.A.Grozman, L.Z.Rusakov, and N.B.Fel'dman (Avtor. svid. No. 135394 ot 25 marta 1960) and involving 2-hour roastings at 910 and 1180-1270°C. X-ray studies showed that solid solutions were formed for values of x up to 0.5 and above. The volume of the unit cell decreased with increasing x ; from this it is concluded that the trivalent

Card 1/2

L 7835-66

ACC NR: AP5028118

lanthanum ions replace the divalent lead rather than the tetravalent titanium ions. The dielectric constant and electric conductivity were measured at different temperatures, dielectric hysteresis loops were observed, and the piezoelectric properties were investigated by the resonance method. The solid solutions showed both ferroelectric and piezoelectric properties. The Curie temperature decreased with increasing x from approximately 500°C for $x = 0$ to 0°C for $x = 0.5$; this decrease of the Curie temperature is ascribed to the fact that the trivalent lanthanum ions are considerably less polarizable than the divalent lead ions that they replace. The radial electromechanical coupling constants of polarized specimens ranged between 0.1 and 0.2, the piezoelectric activity increasing with increasing x . The electric conductivities of the solid solutions were in general less than that of pure lead titanate. By extrapolating hysteresis loop measurements to $x = 0$, values of 4 kV/cm and $50 \mu\text{C}/\text{cm}^2$ were found for the coercive field and spontaneous polarization of lead titanate. This value of the polarization is in good agreement with the finding of G. Shirano and S. Hochino (proc. Inst. Rad. Engrs., 43, No. 12, 1738 (1955)), but the value $90\text{--}100 \mu\text{C}/\text{cm}^2$ calculated from the latent heat of the phase transformation is believed to be more nearly correct. The discrepancy is ascribed to the use of ceramic specimens rather than single crystals. It is concluded that the investigated materials will find practical application, owing to their rather high Curie points and their appreciable piezoelectric activities. Orig. art. has: 6 figures.

TITLE: Increasing the piezoactivity of ceramic piezoelements. Class 21, No. 178864.

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 4, 1966, 32-33

TOPIC TAGS: piezoactivity, piezoelectric ceramic element

ABSTRACT: An Author Certificate has been issued describing a method using heat treatment to increase the piezoactivity of piezoelectric ceramic elements. To raise the electromechanical coupling coefficient during radial vibrations, the blanks of piezoceramic elements with electrodes applied to them are heated to temperatures of 20-70C above the Curie point, cooled at maximum rate to room temperature, and polarized. On the Transcendence of Numbers of Some Classes (O trans -
tsendentnosti chisel nekotorykh klassov)

PERIODICAL:

Uspekhi matematicheskikh nauk, 1959, Vol 14, Nr 1, pp 237-244 (USSR)

ABSTRACT:

In 1955 Roth [Ref 1] has shown that α is transcendental if
 $\left| \alpha - \frac{p}{q} \right| < \frac{1}{q^k}$, $k > 2$, $(p, q) = 1$ has infinitely many integral
solutions p, q . The author shows (theorem 1) that this theorem
is also valid for $k > 1$ if q in essential consists of powers of
fixed prime numbers. Theorem 2 is contained in Th. Schneider,
"Einführung in die transzendenten Zahlen", Göttingen 1957.

Theorem 3: Let the coefficients of the series $f(x) = a_0 x^{m_0} + \dots$
 $\dots + a_n x^{m_n} + \dots$ (radius of convergence $R > 0$) be rational numbers.

Let $\lim_{n \rightarrow \infty} \sup \frac{m_{n+1}}{m_n} = c > 1$, $\lim_{n \rightarrow \infty} \frac{\ln Q_n}{m_n} = 0$, where Q_n is the common

AUTHOR: Fel'dman, N.I.

TITLE: On the approximation of the number π by algebraic numbers of fields generated by the roots of unity

PERIODICAL: Referativnyy zhurnal. Matematika, no.8, 1960, 18, abstract no.8560. Tr. Mosk. geol.-razved. in-ta, 1959, 36, 188-198

TEXT: The author considered the question on the approximation of the number π by algebraic numbers ξ (Izv. AN SSSR, Ser. matem., 1951, 15, no.1, 53-74) and obtained the estimation

$$|\pi - \xi| > \exp \left\{ -\gamma \nu (1 + \nu \ln \nu + \ln H) \lambda \ln(2 + \nu \ln \nu + \ln H) \right\}, \quad (1)$$

where ξ is an algebraic number of degree ν and the height H , while γ is an absolute constant.

In the abstracted article the author gives an estimation more exact than (1) for the special case where ξ are algebraic numbers belonging to the fields of the roots of unity.

Theorem 1: Let n be an arbitrary natural number, $\xi > 0$; let $K = R(e^{2\pi i/n})$ be a field arising from the field of rational numbers by adjoining the

Card 1/2

89530

S/044/60/000/008/002/035

C111/C222

On the approximation of the...

number $\xi = e^{2\pi i/n}$; let ξ be an arbitrary number of this field with the degree ν and the height H . If then $\ln n > \xi \ln H$ then there exists a constant number Λ_0 depending on ξ so that the inequality

$$|\pi - \xi| > \exp(-\Lambda_0 \varphi(n) N \ln N)$$

$$N = \varphi(N) + \frac{\varphi(N) \ln(H+2)}{\nu \ln \ln(H+2)}$$

is satisfied, where $\varphi(n)$ -- Euler function.

With the aid of theorem 1 the author obtains an estimation from below for $|\pi x - \cos \pi y|$ for rational $x \neq 0$ and y .

TITLE:

On the Measure of Transcendency of Number π and of the Logarithms of Algebraic Numbers

PERIODICAL:

Doklady Akademii nauk SSSR, 1959, Vol 126, Nr 6, pp 1214-1215 (USSR)

ABSTRACT:

The function

$$\phi(H, n, \xi) = \min_{|a_k| \leq H} |a_0 + a_1 \xi + \dots + a_n \xi^n|$$

where a_k is integer rational, $\sum a_k^2 > 0$ is denoted as the measure of transcendency of a number ξ .

The author gives the following estimations:

$$\phi(H, n, \ln \alpha) > e^{-\gamma_1 n^2 \ln(n+1)(1+n \ln n + \ln H) \ln(2+n \ln n + \ln H)}$$

(1)

$$\phi(H, n, \pi) > e^{-\gamma_2 n(1+n \ln n + \ln H) \ln(2+n \ln n + \ln H)}$$

Here γ_1 depends only on the algebraic number α and on the

Card 1/2

On the Measure of Transcendancy of Number \tilde{u} and of the Logarithms of Algebraic Numbers SOV/20-126-6-16/67

choice of the Logarithm branch, γ_2 is an absolute constant. H and n are arbitrary and independent from each other. The deduction of the formulas (1) is based on the methods of A.O. Gel'fond [Ref 9]. D.D. Mordukhay - Boltovskiy is mentioned.

TITLE: On the Measure of Transcendency of the Number π

PERIODICAL: Izvestiya Akademii nauk SSSR, Seriya matematicheskaya, 1960,
Vol. 24, No. 3, pp. 357-368

TEXT: The paper contains detailed proofs for the results announced in
(Ref. 10) on the estimation from below of the magnitudes $|\pi - \xi|$ and
 $|a_n \pi^n + \dots + a_1 \pi + a_0|$, where ξ is an algebraic number of n-th degree.

There are 8 lemmata and 2 theorems. For the proofs the author uses ideas
of O.A. Gel'fond (Ref. 7) and an older own paper (Ref. 5).

TITLE: On the Approximation of the Logarithms of Algebraic Numbers
by Algebraic Numbers

PERIODICAL: Izvestiya Akademii nauk SSSR, Seriya matematicheskaya,
1960, Vol. 24, No. 4, pp. 475-492

TEXT: Theorem 1: Let $\ln \alpha_1, \dots, \ln \alpha_m$ be linearly independent
logarithms of the algebraic numbers $\alpha_1, \dots, \alpha_m$. There exists a
constant $\Lambda_0 = \Lambda_0(\ln \alpha_1, \dots, \ln \alpha_m)$, such that for arbitrary
algebraic numbers ξ_1, \dots, ξ_m it holds

$$(18) \quad |\ln \alpha_1 - \xi_1| + \dots + |\ln \alpha_m - \xi_m| > H^{-\Lambda_0 (n \ln(n+2))^{1+1/m}}$$

where n is the degree of the field $R(\alpha_1, \dots, \alpha_m; \xi_1, \dots, \xi_m)$

$$(19) \quad H = \exp \left\{ n \left(\frac{\ln h_1}{n_1} + \dots + \frac{\ln h_m}{n_m} \right) \right\}$$

On the Approximation of the Logarithms of Algebraic Numbers by
Algebraic Numbers

and $n_1, h_1; \dots; n_m, h_m$ are the degrees and heights of the numbers

ξ_1, \dots, ξ_m , where $n < \sqrt[n]{\ln H}$.

Theorem 2: Let $\alpha \neq 0, 1$ be a fixed algebraic number, $\ln \alpha$ a fixed
of its value logarithm. There exists a constant $\Lambda_1 = \Lambda_1(\ln \alpha)$,
such that for every algebraic number ξ of degree n and height H ,
where $n < \sqrt[n]{\ln H}$, it holds

$$(48) \quad |\xi - \ln \alpha| > H^{-\Lambda_1 n^2 \ln^2(n+2)}$$

Theorem 3: Let $\alpha \neq 0, 1$ be a fixed algebraic number, $\ln \alpha$ a fixed
value of its logarithm. There exists a constant $\Lambda_2 = \Lambda_2(\ln \alpha)$,
such that

$$(49) \quad |P(\ln \alpha)| > H^{-\Lambda_2 n^2 \ln^2(n+2)}$$

On the Approximation of the Logarithms of Algebraic Numbers by Algebraic Numbers

where $P(z) \neq 0$ is a polynomial with integer rational coefficients of degree n and height H , where $n \leq \sqrt{\ln H}$. (49) is obtained from (48) according to the method of (Ref.3). Theorem 2 follows from theorem 1 (specialization). The inequality (18) is obtained by the same method by which the author determined in (Ref.6) the measure of transcendence of π . He essentially used the method of A.O. Gel'fond (Ref.7). The proof of theorem 1 is based on 11 lemmata (partially known).

D.D. Mordukhay-Boltovskoy is mentioned in the paper.
